

## **Graduate School Introductions**

Within the context of globalization and an information-based society, we aim to nurture professionals that are of benefit to the local community through an advanced specialized knowledge of Commerce, Law, and Economics which requires an accurate analysis the rapidly changing society of today. We offer a flexible program utilizing not only a semester system but also evening classes for those wishing to restart or refresh their current educational skills.

### Graduate School of Commerce

**Commercial Science, business Administration, Marketing Management, Service Management, Accounting, Management Accounting**

In the Graduate School of Commerce, we nurture business professionals through a program that contributes the development of the local society while maintaining a global perspective. While fully utilizing each person's individuality, the course develops students' abilities to comprehend, analyze, and accurately find solutions in today's business and international world. We endeavor to develop highly specialized professionals such as certified Public Accountants, Tax Accountants, and Small Business Consultants.

### Graduate School of Law

**Tax Law, Labor Law, Constitutional Law, Administrative Law**

In the Graduate School of Law, we have introduced a curriculum that follows the guiding principles of the department which also represents the trends of society.

Through legal analysis, we aim to nurture highly specialized legal experts while also considering the needs of general members of society. Upon completion of the course, many of our graduates become practicing tax accountants. In addition, there are lectures for tax accountants and public notaries to enable them to expand their current knowledge.

Graduate School of Economics

**Economic Principles, International Economics, Economics Policy, Regional Economics**

In the graduate School of Economics, students will

- 1) Be able to practically analyze the realities of the local economy,
- 2) Be able to solve diverse problems and be able to formulate policies,
- 3) Be able to logically predict, and provide evidence for, the future of the local economy.

Fully utilizing their abilities, the course aims to nurture experts in the local economy. Through an original curriculum that adds to the specialized knowledge of local economics, the course offers a high level of specialized skill necessary in order to acquire practical, applied skills.
